Campus Crowds Meeting Agenda:
1. Read Mission statement
2. Read Problem statement
3. High level view of our ideal solution
4. Demo of prototype
5. Features that will be implemented before Customer meeting 2 (10/19)
6. Solicit feedback
7. Review your backlog and prioritize

Mission Statement:

At CampusCrowds we are committed to providing a tool to help students save time waiting in lines, thus promoting a healthy lifestyle by reducing stress and enabling regular eating habits.

High level view of your ideal solution:

Our mobile application will allow users to select a University of San Diego restaurant location and see real time data on the current wait time. Each individual restaurant location will have a picture and view button. The picture button will allow a user to take a picture of the current line size which will be posted along with a timestamp for other users to see. The view button will take the user to a separate page where recently uploaded pictures of the line will be displayed.

Demo:

1. Hand written diagram
2. Application
   a. Showed the different locations
   b. Taking a picture, how it updates the database
3. Database

Features for next Customer meeting

1. Feedback on UI?
2. Feedback regarding existing functionality?
3. Ideas for new features?
